

Flower Power

(your picture here)

What you need:

Cut flowers – Water – Flower jars – Household additive (e.g., salt, sugar, vinegar, hand soap, laundry soap, etc.)

Note - Make sure you check with your parents before you start using anything from the kitchen or bathroom.

What to do:

1. Decide which household additive(s) you are going to use.
2. Label your jars and prepare your flowers (e.g., remove extra leaves, cut them if they are too tall).
3. Add water and additive to each jar – record how much of everything you use. Also, don't forget to keep one jar with nothing but water – this is your control!
4. Write down any initial observations for the liquid or the flowers. If possible, take a picture.
5. Over the next few days look at your flowers and write down any observations.

Record your observations:

- Which flowers did well? Which ones didn't do well?
- Did some change faster than other?
- Can you explain why?
- How does what you have observed make you think about things you do at home?

Observations

Start Date: _____

Flower Type: _____

Jar number	Additive	Amount of water	Amount of Additive	Initial Observations
1	nothing
