

# Stolen from Nature

Plants and animals develop in a way that helps them to survive. Sometimes, they develop in a way that is helpful for us. For example, pine trees are tall, straight and thin, which makes them easier to use to build log cabins than large oak trees.

Can you think of four different things from nature that we use? What about them makes them useful?

| 3) | 4) |

# What was nature thinking?

Now for the Challenge!

Think about two species of plant or animal that are similar but have features that have developed differently. Describe the two features and hypothesize why you think they may be different.

Birch Tree

vs.

Oak Tree

Snow Leopard

vs.

Jaguar
